PROFESSIONAL SUMMARY

Second-year Economics student at Tashkent State University of Economics with a strong interest in Artificial Intelligence, Machine Learning, and Data Science. Experienced in building practical AI applications including RAG systems, computer vision tools, and machine learning models using Python. Passionate about solving programming challenges and continuously learning modern technologies.

EDUCATION

Najot Ta'lim

AI/ML Program

Tashkent State University of Economics (TSUE)

Bachelor's Degree in Economics — Expected Graduation: 2029

TECHNICAL SKILLS

Programming	Python
Data Science	NumPy, Pandas, Matplotlib, Scikit-learn
Machine Learning	Linear Regression, Logistic Regression, Data Preprocessing, Feature Engineering, One-Hot Encoding, Standardization, Model Evaluation
AI & NLP	Retrieval-Augmented Generation (RAG), Sentence Transformers, FAISS, BM25, Cross-Encoder Re-ranking
Deep Learning	PyTorch, CUDA GPU Acceleration
Computer Vision	OpenCV, Face Recognition, Image Processing
Tools	Jupyter Notebook, VS Code, Ollama, Git

PROJECTS

Uzbek Hybrid RAG AI Assistant

Developed a bilingual (Uzbek/English) RAG assistant that answers questions from uploaded PDF textbooks using hybrid retrieval (FAISS + BM25) with cross-encoder reranking. Includes tool calling, conversation memory, and a Streamlit web UI.

Technologies: Python, FAISS, Sentence Transformers, BM25, Cross-Encoder, Ollama, LangGraph, FastAPI, Streamlit

AI Data Analysis Agent

Built an offline-first data analysis agent that accepts CSV/XLSX uploads and supports natural language queries for EDA, visualization, machine learning, data cleaning, and PDF report generation. Supports both English and Uzbek.

Technologies: Python, pandas, NumPy, Matplotlib, Scikit-learn, FastAPI, Streamlit, ReportLab

AI Travel Agent

Created a natural-language travel assistant that searches, compares, and recommends real flights using the AviationStack API. Features currency conversion, airport lookup, favorite routes, and multi-turn conversation memory.

Technologies: Python, Ollama (Llama 3.2), Streamlit, AviationStack API

Face Recognition System

Created a face recognition application that identifies known users and allows registration of new users through a webcam. Features real-time face detection, user registration, and local dataset management.

LANGUAGES

Uzbek — Native
English — Upper-Intermediate (IELTS 6.5)

INTERESTS

Artificial Intelligence, Machine Learning, Data Science, Computer Vision, Natural Language Processing, Software Development

CERTIFICATIONS

Upcoming — expected within 1 month.
